Quam

The **Digital Twin** of Your Organization.

Business Relationship Management,
Redefined with Quam.

Process, Project and Organization Management for Efficient Companies of the Future!

Understanding a interconnected process world without software support is virtually impossible. Quam maps complex organizational structures simply and digitally. It provides information about changes in the organization and manages their improvement. As a result, Quam becomes the "operating system" of your company.

By integrating our project management tool Cpm into Quam 6.0, we have now

laid the foundation for linking processes and projects. Therefore Quam can now take over the functions of a multi-project management system. Insights from the projects flow directly back into the process world and the projects are automatically enriched with essential organizational information.

Digitally Map Your Entire Organisation.

You can use Quam to quickly and easily document your business processes in process maps and procedural descriptions, or to capture your organisational structures in form of organizational charts.

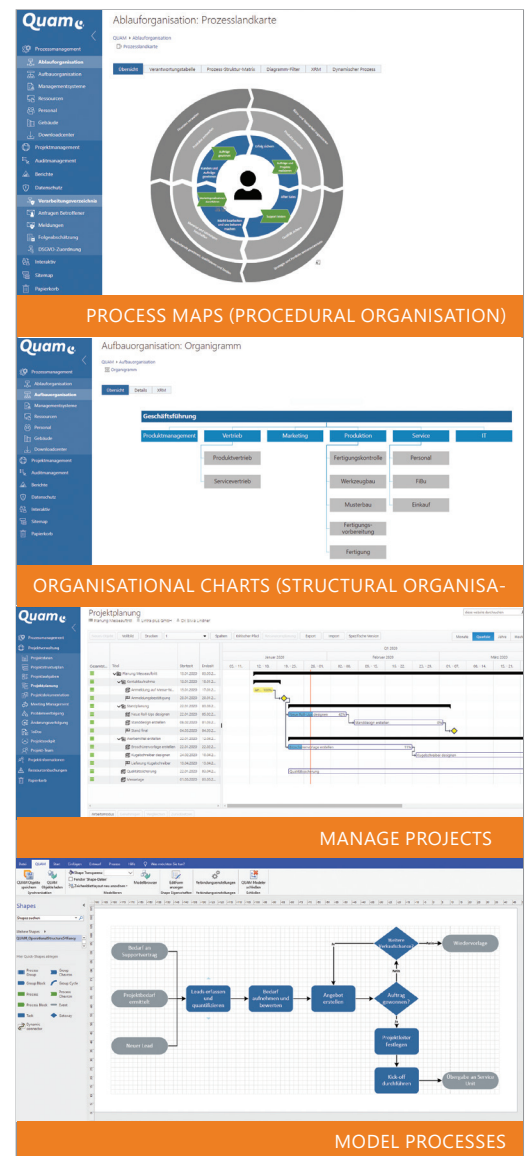

To ensure your entire business is mapped, Quam also captures the resources that you use, such as your employees, IT systems, locations, and documents. These structures can in turn be published as standard work instructions to your employees in multiple languages.

Quam allows you to gain access to your organization from a variety of perspectives and prepares the information for different functional groups within your organization, such as Quality

Managers, HR Managers, or project employees. Take an active approach to project management by reorganising or standardising your processes. Use Quam as a quality management tool to plan and implement audits. Create standards and rules, then assign them to tasks or procedures and make them easily accessible and usable for employees.

Or use Quam as an idea and innovation management platform where your employees can put forward their suggestions and discuss them.

Quam ensures to retain important knowledge!

The Right View from Every Angle!

Quam allows you to gain an overview of your organization from all kinds of functional viewpoints, such as:

Quality Managers

HR Managers

Project Managers & Employees

Process Managers & Consultants

Business Analysts

Business Coaches

IT & System Consultants

Supply Chain Managers

Product Managers

Consistent Mapping

Redundancy-free Data Retention

Audit-proof Management

Alignment with Corporate Design

Business Relationship Management

Business Process Management

Integrated Management

Project Management

Quality and Audit Management

Risk Management

Data Protection Management

Collaboration & Communication

Idea & Innovation Management

New in Quam 6.0

Integrated Project Management

Integration of multi-project management functionalities and the ability of referencing data between projects and processes, structures, management systems, resources and locations.

Integrated Data Protection Management

Integration of a GDPR module (General Data Protection Regulation) providing functionalities, and standard content for GDPR, such as the contents of the Regulation or the processing directory. This allows users to enter personal data, to assign these data to processes and processing systems, to display them, and to evaluate them where necessary.

Linking of Existing Systems within Companies

Quam 6.0 enables existing organizational and IT systems to be linked. As a result, Quam can be used as a central management tool to manage formerly decentralized organizational information. Thus users will have access to centralized work equipment, templates, and forms, or access IT systems and HR information.

Design Improvements and New Shape Sets

Revision of the design and usability through further harmonization of design elements and functional views as well as a new and improved shape set that can be easier differentiated.

Support of Process Harmonization

Sub-processes that are already used or referenced in other processes are now immediately visible in the process diagram during process visualization and are directly linked by an interactive icon. This helps to prevent duplication of work and allows the use of those processes already modelled.

New Any-Relationship-Matrix

Easier, faster, and highly functional linking of organizational elements via the new Any-Relation-Matrix (XRM) using fixed table headers, drag-and-drop functionalities, additional icons, and improved search function.

Additional Functionalities

- » Audit Management
- » Word Report
- » Multilingualism
- » Versioning and Content Change Management (CCM)

Pricing Models

Purchase

Classical software purchase with optional software maintenance and hotline support. The purchase license is particularly well suited for a foreseeable long useful life of Quam, with steady user figures, and if own software operating capacities are available. A one-time investment instead of ongoing cost.

SaaS

Quam offered as a "Software as a Service" model, a rental model for selected hosting partners. Use Quam with Microsoft Azure or Office365 Cloud. For you, the most convenient choice – we take care of the installation process and the hosting for your Quam system.

Subscription

As an alternative to SaaS or purchase, Lintra also offers Quam as a subscription model featuring optional software maintenance and hotline support. You choose the term, number of users and operating environment (internal data center or cloud).
